

In-Home Monitoring Program

Overview:

- Home-based services to monitor and intervene in chronic conditions
- Joint project of USA, Public Health and Medicaid
- Designed to target high cost individuals with chronic conditions
- Measures blood sugar, blood pressure and weight, as requested
- Simple patient enrollment, faxable one-page form
- Physician-directed, patient-specific medical interventions
 - PMP identifies patients
 - PMP specifies the intervention
 - PMP sets parameters

Physician Benefits:

- Assistance with management of high-risk patients
- Disease measurements reflect patient's daily life
- Safety net for the patient through increased disease awareness
- Improved communication with patient
- Increased physician credibility

USA's Role:

- Provide the equipment
- Centralized monitoring
- Physician reports
- Web based monitoring and reporting
- First level intervention

ADPH's Role:

- Placement of equipment/patient education
- On-site patient intervention
- Complemented with traditional home health/case management

Upon Patient Enrollment:

- USA coordinates with local ADPH nurses
- Once equipment placed, physician notified
- Charted results based on physician direction
